

Finding evidence and expertise in computer fraud have become essential in our electronic world when a crime occurs. Whether it's a case of inside fraud or more serious criminal activity, ESI Technologies can help you to collect and document electronic data as evidence of such activities.

Finding electronic evidence is crucial in the following cases:

- ▶ A disloyal employee
- ▶ Intrusion into your computer systems
- ▶ Breach of contract
- ▶ Industrial espionage
- ▶ Fraud
- ▶ Insider trading
- ▶ Employee-employer disputes
- ▶ Psychological harassment
- ▶ Identity theft

The procedures established by ESI Technologies can ensure that the information collected is admissible as evidence in court. Only the proper combination of hardware (disk cloning), software (recovery, reconstruction, and analysis), and specialized skill can produce the desired result.

### Benefits

- Service from experts with extensive experience in this field
- Swift professional service
- Data processing in multiple environments
- Less expensive than setting up your own investigation team

### Characteristics

- 24/7 emergency hotline
- Toll-free emergency number: 1 877 ESI-1911
- On-site assistance
- Rapid response in executing seizures
- Post-mortem with recommendations

We have considerable experience with firewalls, routers, and TCP/IP networks in general. We are experts in every version of Windows, as well as Linux and Solaris systems.

We also have experience working with corporate lawyers, outside law firms, internal investigation teams, and police forces.

To protect the integrity of collected data, all of our computer investigation consultants are ESI employees. We do not use outside consultants to work on such computer evidence.

We also offer courses in computer investigation for law firms.

We also provide these services to many major corporations. As impressive as our client list is, we respect the confidentiality of our relations with our clients, and we do not publish their names.
